Flows & Liquidity

Equity market concentration and the shift from active to passive funds

- We are sceptical of the thesis that the shift from active to passive is being reinforced by increasing US equity market concentration.
- While active funds appear to be overall UW the ‘Magnificent 7’ stocks, they have managed to outperform their benchmarks both during 2023 and YTD, there is little sign of the active to passive shift having accelerated as a share of AUM.
- The SEC diversification rule may not be as critical as it might seem taken at face value.
- This week’s yen interventions may imply that Japanese authorities would have to consume a greater amount of foreign currency reserves to have the same impact as before.
- Retail investors retrench from both equity and crypto markets.

- The shift from active to passive equity funds continues unabated with active equity mutual funds bearing the brunt of equity fund selling in April. A question often arising in our client conversations is whether the shift from active to passive equity funds is reinforced by US equity market concentration and the rise of Magnificent seven stocks. The argument being that as active equity managers struggle to catch up with the rising weight of US large tech stocks and as they face the SEC’s diversification rule or their own stock/sector limits, they are forced to limit their exposure to the largest US tech stocks, which in turn makes it more difficult to outperform benchmarks in the current juncture. This in turn induces end investors such as retail investors to shift even more towards passive equity funds which, by simply tracking equity indices, do not face such concentration constraints. And this flow shift creates a self-reinforcing circle: as more money goes into passive equity funds it ends up in large tech stocks, which then expand further, becoming even bigger components of equity indices.

J.P. Morgan does and seeks to do business with companies covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.

- Figure 1 While we are sympathetic to some of the above arguments, we are sceptical of the overall thesis.
- It is certainly the case that there has been an increased concentration since the onset of the pandemic when looking at the share of the so-called ‘Magnificent 7’ (Apple, Amazon, Alphabet, Meta, Microsoft, NVIDIA and Tesla) as a share of total S&P 500 market capitalisation (Figure 1). It is also evident in their shares of total S&P 500 earnings, though perhaps less so in terms of sales. Interestingly, while there is a perception that the large tech companies are ‘defensives’, the earnings as a % of total S&P earnings do exhibit cyclicalities in the upswing in 2020/21, the correction in 2022 and from mid-2023 onward. This suggests they may be somewhat less defensive than commonly perceived. And when we take the difference between the Magnificent 7 share of S&P market cap and their share of revenues, equity market concentration has not made any new highs beyond the step increase seen after the pandemic (Figure 2).

Figure 1: Magnificent 7 share of S&P 500 market capitalisation, earnings and sales

Source: Bloomberg Finance L.P., J.P. Morgan.

Figure 2: Difference between market capitalisation and sales shares of the Magnificent 7 share in the S&P 500

Source: Bloomberg Finance L.P., J.P. Morgan.

- Second, while it is true that share of Magnificent 7 stocks is overall higher in passive vs active funds (by adding up the weights in Figure 3 we get 26% overall allocation for active funds vs 29% for passive funds), the biggest US active equity mutual fund managers have managed to outperform their benchmarks during 2023 and YTD, as shown by Figure 4 and Figure 5. This perhaps reflect their UWs in Apple and Tesla and their OWs in Microsoft and Google, as shown in Figure 3. For example, if we apply the allocations in Magnificent 7 stocks shown in Figure 3, we find that active funds would have slightly outperformed passive funds YTD.

Figure 3: Share of active and passive equity funds’ holdings* in Magnificent 7 stocks relative to their total holdings of stocks in the S&P 500 index*

In %. As on 1st May 24.

Source: Bloomberg Finance L.P., J.P. Morgan.

* where active and passive ownership is specifically identified, excludes ‘unknown’ management style holdings.

Source: Bloomberg Finance L.P., J.P. Morgan.

Figure 5: Share of 100 biggest active US equity mutual funds beating their benchmark

Source: Bloomberg Finance L.P., J.P. Morgan.

- Third, the shift from active to passive equity funds has been taking place for some time and the trend does not appear to be accelerating due to the rise of Magnificent 7 stocks (Figure 6). Indeed, while there has been an acceleration in the outflow from active funds in nominal terms, with an increase in outflows in 2016 to \$390bn having accelerated to around \$500bn in 2020, 2022 and 2023, this is largely due to a price effect. The outflows relative to AUM, which rose to just over 6% in 2016, have been similar in magnitude in recent years.

Figure 6: Share of active vs. passive in equity US domiciled funds

As % of total AUM. Active and passive funds are US domiciled. Passive funds include ETFs. Last obs. is Mar'24.

Source: ICI, J.P. Morgan.

- Fourth, the SEC diversification rule itself is perhaps not as critical as it seems on surface for three reasons. A) Our understanding of the SEC diversification rule is that up to 25% of fund assets can be held as large holdings (i.e. stocks with more than 5% of fund's assets). This leaves

room for active funds to have a few large exposures of >5% such as in Microsoft, Apple, Nvidia. B) Even if the room under this 25% rule is exhausted, funds have the option to re-categorise themselves as “non-diversified” and appeal to investors for picking the highest quality/highest return potential stocks (as successful equity long/short hedge funds and non-diversified active equity managers argue). And there is no evidence that end investors mind stock concentration. A simple fund search shows that less than 10% of US active equity mutual funds use “diversified” in their fund description. And after all, end investors have been pouring money into equity index ETFs and equity long/short hedge funds despite high/rising concentrations. C) While the SEC rule limits the addition of new exposure to individual stocks once the thresholds have been breached, as we note above active funds on aggregate are seeing outflows as part of the shift from active to passive. Active funds seeing outflows could simply sell other stocks to return cash to investors and increase their exposure to the magnificent 7 stocks beyond the above thresholds in a passive way.

- In all, we are sceptical of the thesis that the shift from active to passive is being reinforced by increasing US equity market concentration. While active funds appear to be overall UW the Magnificent 7 stocks, they have managed to outperform their benchmarks both during 2023 and YTD, there is little sign of the active to passive shift having accelerated as a share of AUM. And the SEC diversification rule may not be as critical as it might seem taken at face value.

This week's yen interventions may imply that Japanese authorities would have to consume a greater amount of foreign currency reserves to have the same impact as before

- Japanese authorities appear to have intervened twice this week in periods of thin liquidity, on Monday 29th of April during a Japanese holiday and in late New York trading on May 1st. In both days the dollar dropped by around 5 yen intraday. We do not yet have information about the size of the intervention on May 1st, but press reports and the reported daily projection of changes in current account balances at the Bank of Japan point to around JPY6tr of intervention on April 29th. Provisional daily data on BoJ's projected current account balances (that are subject to revisions) point to somewhat smaller intervention amount on May 1st of around JPY4tr, bringing this week's total intervention to around JPY10tr. That said, the provisional figures for the intervention on Monday were subsequently revised higher.

- This compares to a total intervention of around JPY9tr during Sep/Oct 2022 (in three series interventions on Sep 22nd, Oct 21st and Oct 24th 2022). At the time JPY2.8tr was used for Sep 22nd, JPY5.6tr for Oct 21st and JPY0.7tr for Oct 24th. Each of those three interventions had caused an immediate (but temporary) drop in the dollar of around 5-6 yen. The intervention last Monday April 29th 2024 had caused an immediate (and again temporary) drop in the dollar of around 5 yen. So at face value and assuming the size was JPY6tr as suggested by press reports and daily current account balances, last Monday's intervention was somewhat less impactful per each trillion yen bought than the Sep/Oct 2022 interventions overall. In turn this may imply that Japanese authorities would have to consume a greater amount of foreign currency reserves to have the same impact.
- In terms of how the intervention was funded, typically it is dollar deposits (like those held by the MoF at the Fed's reverse repo facility) that are consumed during the actual intervention. That said, the lesson from the Sep/Oct 2022 interventions is that these deposits tend to be replenished relative quickly by the MoF eventually selling dollar securities. In other words, some downward pressure in short-dated USTs is likely as dollar securities are eventually sold in the days/weeks following this week's interventions.
- Indeed during the Sep/Oct 2022 interventions while at the time of the actual interventions dollar deposits were likely consumed, cumulatively over these two months the item "Deposits with Foreign central banks and BIS" at MoF's Official Reserve Assets was roughly unchanged at around \$136bn between Aug 31st 2022 and Oct 31st 2022. That is, dollar deposits were replenished within days or weeks by the MoF likely selling USTs. Instead the market value of "Securities" at the MoF's foreign currency reserves had declined from \$1037bn Aug 31st 2022 to \$941bn Oct 31st 2022. Surely a significant part of this \$96bn market value reduction was due to price changes as UST yields had increased by 100bp at the time. Assuming duration of 3 years for the dollar securities held as reserves, a 100bp increase in UST yields would imply a loss of around $3 \times 100\text{bp} = 3\%$ or \$31bn, so the remaining $\$96\text{bn} - \$31\text{bn} = \$65\text{bn}$ reduction in the market value of "Securities" in Japan's foreign currency reserve assets would be due to sales to fund the intervention. This estimate is comparable to the actual intervention amount of JPY9.2tr during Sep/Oct 2022.
- Similar to Sep/Oct 2022 the intervention did little in changing investors attitudes towards Japanese assets. Institutional investors, both offshore and onshore, continue to hold elevated Japanese equity exposures (Figure 7 to Figure 9), roughly neutral positions in JGBs (Figure 10)

and very negative positions in the yen (Figure 11 and Figure 12).

- We recommend our readers to also see the latest notes by our yen strategist Junya Tanase.

Retail investors retrench from both equity and crypto markets

- We had argued in our previous publication [F&L](#) April 17th that the bitcoin halving was priced in and there was likely to be downside pressure on bitcoin prices post halving for three reasons:
 - i. Still overbought conditions as per our futures position proxy.
 - ii. Bitcoin prices still well above our vol adjusted comparison to gold (\$45k, see [F&L](#) March 7th) or its medium term projected production cost post halving once unprofitable miners retrench (\$42k,

see [F&L](#) Feb 28th).

iii. Subdued crypto VC funding YTD despite the crypto resurgence

- The past two weeks saw significant selling/profit taking with perhaps retail investors playing a bigger role than institutional investors. In fact retail investors appear to have sold both crypto and equity assets during April. Indeed, not only have spot bitcoin ETFs seen outflows in April (Figure 13) but our proxies of the retail impulse into equities have also downshifted over the past month. This is shown by Figure 14 to Figure 18. Figure 14 highlights the net flow into equity funds including ETFs and mutual funds, typically used by retail investors. The net flow into equity funds turned negative in April after strong buying in February and March. Figure 15 depicts small traders' option flows for exchange-traded individual equity options in the US which has also downshifted in recent weeks. This is a proxy for the net flow into call options by US retail investors i.e. option customers with less than 10 contracts. The data come from OCC, the world's largest equity derivatives clearing organisation and are weekly, with the week ending April 26th the last available observation. Figure 16 highlights the relative performance of 50% Nasdaq + 50% Russell 2000 basket vs. the S&P500 Index, which has also declined in recent weeks consistent with retail investors selling, given that Nasdaq and Russell 2000 stocks are the preferred habitats of US retail investors. Figure 17 shows the relative performance of US Retail Investors' Favorites US equity basket vs. S&P500 Index has also declined in recent weeks consistent with retail investors sell-off. Finally, the swings we observe in US retail investors' sentiment surveys such as the AAII survey (shown in Figure 18) has swung from bullish to bearish territory last month.
- In terms of institutional investors, it has been mostly momentum traders such as CTAs or other quantitative funds taking profit on previous extreme long positions in both bitcoin and gold, as shown by our momentum traders' positioning proxies of Figure 19.
- However, the overall positioning across our futures as shown in Figure 20 declined by less than our momentum signals in Figure 19 suggesting a more limited position reduction by other institutional investors outside quantitative funds/CTAs.
- In all, with a lack of positive catalysts, with the retail impulse dissipating and with the three headwinds mentioned previously in our publication (elevated positioning, high bitcoin prices vs gold and vs the estimated bitcoin production cost, subdued crypto VC funding) still in place, we maintain a cautious stance on crypto markets over the near term.

Chart A2: Fund flow indicator

Difference between flows into Equity and Bond funds: \$bn per week. Difference between flows into Equity vs. Bond funds in \$bn per week. Flows include Mutual Fund and ETF flows globally, i.e. funds domiciled both inside and outside the US (source: EPFR). The thin blue line shows the 4-week average of difference between Equity and Bond fund flows. Dotted lines depict ± 1 StDev of the blue line. The thick black line shows a smoothed version of the same series. The smoothing is done using a Hodrick-Prescott filter with a Lambda parameter of 100.

Source: EPFR, J.P. Morgan.

Table A2: Trading turnover monitor

Volumes are monthly and Turnover ratio is annualised (monthly trading volume annualised divided by the amount outstanding). UST Cash is primary dealer transactions in all US government securities. UST futures are from Bloomberg Finance L.P. JGBs are OTC volumes in all Japanese government securities. Bunds, Gold, Oil and Copper are futures. Gold includes Gold ETFs. Min-Max chart is based on Turnover ratio. For Bunds and Commodities, futures trading volumes are used while the outstanding amount is proxied by open interest. The diamond reflects the latest turnover observation. The thin blue line marks the distance between the min and max for the complete time series since Jan-2005 onwards. Y/Y change is change in YTD notional volumes over the same period last year.

As of Mar-24	MIN	MAX	Turnover ratio	Vol (tr)	y/y chng

Chart A11b: Option skew monitor

Skew is the difference between the implied volatility of out-of-the-money (OTM) call options and put options. A positive skew implies more demand for calls than puts and a negative skew, higher demand for puts than calls. It can therefore be seen as an indicator of risk perception in that a highly negative skew inequities is indicative of a bearish view. The chart shows z-score of the skew, i.e. the skew minus a rolling 2-year avg skew divided by a rolling two-year standard deviation of the skew. A negative skew on iTraxx Main means investors favour buying protection, i.e. a short risk position. A positive skew for the Bund reflects a long duration view, also a short risk position.

Source: J.P. Morgan.

Chart A11c: Equity-Bond metric map

Explanation of Equity - Bond metric map: Each of the five axes corresponds to a key indicator for markets. The position of the blue line on each axis shows how far the current observation is from the extremes at either end of the scale. For example, a reading at the centre for value would mean that risky assets are the most expensive they have ever been while a reading at the other end of the axis would mean they are the cheapest they have ever been. Overall, the larger the blue area within the pentagon, the better for the risky markets. All variables are expressed as the percentile of the distribution that the observation falls into. I.e. a reading in the middle of the axis means that the observation falls exactly at the median of all historical observations. **Value:** The slope of the risk-return trade-off line calculated across USTs, US HG and HY corporate bonds and US equities (see GMOS p. 6, Loeys et al, Jul 6 2011 for more details). **Positions:** Difference between net spec positions on US equities and intermediate sector UST. See Chart A13. **Flow momentum:** The difference between flows into equity funds (incl. ETFs) and flows into bond funds. Chart A1. We then smooth this using a Hodrick-Prescott filter with a lambda parameter of 100. We then take the weekly change in this smoothed series as shown in Chart A1. **Economic momentum:** The 2-month change in the global manufacturing PMI. (See REVISITING: Using the Global PMI as trading signal, Nikolaos Panigirtzoglou, Jan 2012). **Equity price momentum:** The 6-month change in the S&P500 equity index. As of 26th Apr 24.

Spec position monitor

Chart A12: Weekly Spec Position Monitor

Net spec positions are proxied by the number of long contracts minus the number of short contracts using the speculative category of the Commitments of Traders reports (as reported by CFTC). To proxy for speculative investors for equity and US Treasury bond futures positions we use Asset managers and leveraged funds (see Chart A13), whereas for other assets we use the legacy Non-Commercial category. This net position is then converted to a dollar amount by multiplying by the contract size and then the corresponding futures price. We then scale the net positions by open interest. The chart shows the z-score of these net positions. US rates is a duration-weighted composite of the individual UST futures contracts excluding the Eurodollar contract.

Source: Bloomberg Finance L.P., CFTC, J.P. Morgan

Chart A13: Positions in US equity futures by Asset managers and Leveraged funds

CFTC positions in US equity futures by Leveraged funds and Asset managers (as a % of open interest). It is an aggregate of the S&P500, DowJones, NASDAQ and their Mini futures contracts.

Source: CFTC, Bloomberg Finance L.P. and J.P. Morgan

Chart A14: Spec position indicator on Risky vs. Safe currencies

Difference between net spec positions on risky & safe currencies. Net spec position is calculated in USD across 5 'risky' and 3 'safe' currencies (safe currencies also include Gold). These positions are then scaled by open interest and we take an average of 'risky' and 'safe' assets to create two series. The chart is then simply the difference between the "risky" and "safe" series. The final series shown in the chart below is demeaned using data since 2006. The risky currencies are: AUD, NZD, CAD, RUB, MXN and BRL. The safe currencies are: JPY, CHF and Gold.

Source: Bloomberg Finance L.P., CFTC, J.P. Morgan

Chart A15: Spec position indicator on US equity futures vs. intermediate sector UST futures

Difference between net spec positions on US equity futures vs. intermediate sector UST futures. This indicator is derived by the difference between total CFTC positions in US equity futures by Asset managers + Leveraged Funds scaled by open interest minus the Asset managers + Leveraged Funds spec position on intermediate sector UST futures (i.e. all UST futures duration weighted ex ED and ex 2Y UST futures) also scaled by open interest.

Source: CFTC, Bloomberg Finance L.P. and J.P. Morgan

Chart A19: Momentum signals for 10Y UST and 10Y Bunds

Average z-score of Short- and Long-term momentum signal in our Trend Following Strategy framework shown in Tables A3 and A4 below in the Appendix

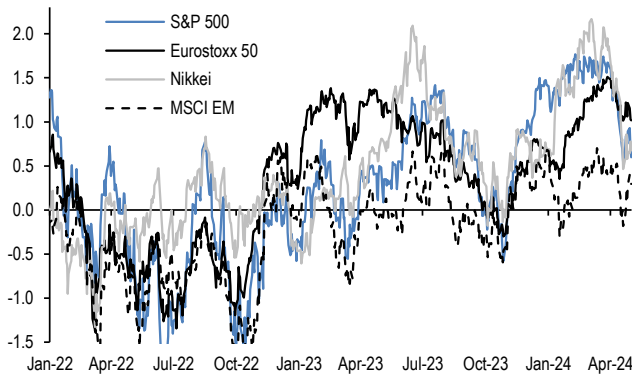

Source: Bloomberg Finance L.P., J.P. Morgan.

02 May 2024

Chart A20: Momentum signals for S&P500

Average z-score of Short- and Long-term momentum signal in our Trend Following Strategy framework shown in Tables A3 and A4 below in the Appendix.

Source: Bloomberg Finance L.P., J.P. Morgan.

Chart A21: Equity beta of US Balanced Mutual funds and Risk Parity funds

Rolling 21-day equity beta based on a bivariate regression of the daily returns of our Balanced Mutual fund and Risk Parity fund return indices to the daily returns of the S&P 500 and BarCap US Agg indices. Given that these funds invest in both equities and bonds we believe that the bivariate regression will be more suitable for these funds. Our risk parity index consists of 25 daily reporting Risk Parity funds. Our Balanced Mutual fund index includes the top 20 US-based active funds by assets and that have existed since 2006. Our Balanced Mutual fund index has a total AUM of \$700bn, which is around half of the total AUM of \$1.5tr of US based Balanced funds which we believe to be a good proxy of the overall industry. It excludes tracker funds and funds with a low tracking error. Dotted lines are average since 2015.

Source: Bloomberg Finance L.P., J.P. Morgan.

Chart A22: Equity beta of monthly reporting Equity Long/Short hedge funds

Proxied by the ratio of the monthly performance of Pivotal Path Asset-Weighted Equity Hedge fund index divided by the monthly performance of MSCI ACWorld Index.

Source: Bloomberg Finance L.P., Pivotal Path, J.P. Morgan

Chart A23: USD exposure of currency hedge funds

The net spec position in the USD as reported by the CFTC. Spec is the non-commercial category from the CFTC.

Source: CFTC, Barclay, Datastream, Bloomberg Finance L.P., J.P. Morgan.

CTAs – Trend following investors’ momentum indicators

Table A3: Simple return momentum trading rules across various commodities

Optimal lookback period of each momentum strategy combined with a mean reversion indicator that turns signal neutral when momentum z-score more than 1.5 standard deviations above or below mean, and a filter that turns neutral when the z-score is low (below 0.05 and above -0.05) to avoid excessive trading. Lookbacks, current signals and z-scores are shown for shorter-term and longer-term momentum separately, along with performance of a combined signal. Annualized return, volatility and information ratio of the signal; current signal; and z-score of the current return over the relevant lookback period; data from 1999 onward.

		Lookback (moving avg, days)	Annualized return (%)	Vol (%)	IR	Current signal	Time since last change (days)	Z-score	% Change of return index from its moving average

Important Disclosures

Company-Specific Disclosures: Important disclosures, including price charts and credit opinion history tables, are available for compendium reports and all J.P. Morgan–covered companies, and certain non-covered companies, by visiting <https://www.jpmm.com/research/disclosures>, calling 1-800-477-0406, or e-mailing research.disclosure.inquiries@jpmorgan.com with your request.

Explanation of Equity Research Ratings, Designations and Analyst(s) Coverage Universe:

J.P. Morgan uses the following rating system: Overweight (over the duration of the price target indicated in this report, we expect this stock will outperform the average total return of the stocks in the Research Analyst’s, or the Research Analyst’s team’s, coverage universe); Neutral (over the duration of the price target indicated in this report, we expect this stock will perform in line with the average total return of the stocks in the Research Analyst’s, or the Research Analyst’s team’s, coverage universe); and Underweight (over the duration of the price target indicated in this report, we expect this stock will underperform the average total return of the stocks in the Research Analyst’s, or the Research Analyst’s team’s, coverage universe. NR is Not Rated. In this case, J.P. Morgan has removed the rating and, if applicable, the price target, for this stock because of either a lack of a sufficient fundamental basis or for legal, regulatory or policy reasons. The previous rating and, if applicable, the price target, no longer should be relied upon. An NR designation is not a recommendation or a rating. In our Asia (ex-Australia and ex-India) and U.K. small- and mid-cap Equity Research, each stock’s expected total return is compared to the expected total return of a benchmark country market index, not to those Research Analysts’ coverage universe. If it does not appear in the Important Disclosures section of this report, the certifying Research Analyst’s coverage universe can be found on J.P. Morgan’s Research website, <https://www.jpmm.com>.

J.P. Morgan Equity Research Ratings Distribution, as of April 06, 2024

	Overweight (buy)	Neutral (hold)	Underweight (sell)
J.P. Morgan Global Equity Research Coverage*	48%	39%	14%
IB clients**	49%	45%	35%
JPMS Equity Research Coverage*	46%	42%	12%
IB clients**	70%	66%	52%

*Please note that the percentages may not add to 100% because of rounding.

**Percentage of subject companies within each of the "buy," "hold" and "sell" categories for which J.P. Morgan has provided investment banking services within the previous 12 months.

For purposes of FINRA ratings distribution rules only, our Overweight rating falls into a buy rating category; our Neutral rating falls into a hold rating category; and our Underweight rating falls into a sell rating category. Please note that stocks with an NR designation are not included in the table above. This information is current as of the end of the most recent calendar quarter.

Equity Valuation and Risks: For valuation methodology and risks associated with covered companies or price targets for covered companies, please see the most recent company-specific research report at <http://www.jpmm.com>, contact the primary analyst or your J.P. Morgan representative, or email research.disclosure.inquiries@jpmorgan.com. For material information about the proprietary models used, please see the Summary of Financials in company-specific research reports and the Company Tearsheets, which are available to download on the company pages of our client website, <http://www.jpmm.com>. This report also sets out within it the material underlying assumptions used.

A history of J.P. Morgan investment recommendations disseminated during the preceding 12 months can be accessed on the Research & Commentary page of <http://www.jpmm.com> where you can also search by analyst name, sector or financial instrument.

Analysts' Compensation: The research analysts responsible for the preparation of this report receive compensation based upon various factors, including the quality and accuracy of research, client feedback, competitive factors, and overall firm revenues.

Registration of non-US Analysts: Unless otherwise noted, the non-US analysts listed on the front of this report are employees of non-US affiliates of J.P. Morgan Securities LLC, may not be registered as research analysts under FINRA rules, may not be associated persons of J.P. Morgan Securities LLC, and may not be subject to FINRA Rule 2241 or 2242 restrictions on communications with covered companies, public appearances, and trading securities held by a research analyst account.

Other Disclosures

J.P. Morgan is a marketing name for investment banking businesses of JPMorgan Chase & Co. and its subsidiaries and affiliates worldwide.

UK MIFID FICC research unbundling exemption: UK clients should refer to [UK MIFID Research Unbundling exemption](#) for details of J.P. Morgan's implementation of the FICC research exemption and guidance on relevant FICC research categorisation.

All research material made available to clients are simultaneously available on our client website, J.P. Morgan Markets, unless specifically permitted by relevant laws. Not all research content is redistributed, e-mailed or made available to third-party aggregators. For all research material available on a particular stock, please contact your sales representative.

Any long form nomenclature for references to China; Hong Kong; Taiwan; and Macau within this research material are Mainland China; Hong Kong SAR (China); Taiwan (China); and Macau SAR (China).

J.P. Morgan Research may, from time to time, write on issuers or securities targeted by economic or financial sanctions imposed or administered by the governmental authorities of the U.S., EU, UK or other relevant jurisdictions (Sanctioned Securities). Nothing in this report is intended to be read or construed as encouraging, facilitating, promoting or otherwise approving investment or dealing in such Sanctioned Securities. Clients should be aware of their own legal and compliance obligations when making investment decisions.

Any digital or crypto assets discussed in this research report are subject to a rapidly changing regulatory landscape. For relevant regulatory advisories on crypto assets, including bitcoin and ether, please see <https://www.jpmorgan.com/disclosures/cryptoasset-disclosure>.

An analyst listed on the front cover has personal holdings in digital or crypto assets.

The author(s) of this research report may not be licensed to carry on regulated activities in your jurisdiction and, if not licensed, do not hold themselves out as being able to do so.

Exchange-Traded Funds (ETFs): J.P. Morgan Securities LLC ("JPMS") acts as authorized participant for substantially all U.S.-listed ETFs. To the extent that any ETFs are mentioned in this report, JPMS may earn commissions and transaction-based compensation in connection with the distribution of those ETF shares and may earn fees for performing other trade-related services, such as securities lending to short sellers of the ETF shares. JPMS may also perform services for the ETFs themselves, including acting as a broker or dealer to the ETFs. In addition, affiliates of JPMS may perform services for the ETFs, including trust, custodial, administration, lending, index calculation and/or maintenance and other services.

Options and Futures related research: If the information contained herein regards options- or futures-related research, such information is available only to persons who have received the proper options or futures risk disclosure documents. Please contact your J.P. Morgan Representative or visit <https://www.theocc.com/components/docs/riskstoc.pdf> for a copy of the Option Clearing Corporation's Characteristics and Risks of Standardized Options or http://www.finra.org/sites/default/files/Security_Futures_Risk_Disclosure_Statement_2018.pdf for a copy of the Security Futures Risk Disclosure Statement.

Changes to Interbank Offered Rates (IBORs) and other benchmark rates: Certain interest rate benchmarks are, or may in the future become, subject to ongoing international, national and other regulatory guidance, reform and proposals for reform. For more information, please consult: https://www.jpmorgan.com/global/disclosures/interbank_offered_rates

Private Bank Clients: Where you are receiving research as a client of the private banking businesses offered by JPMorgan Chase & Co. and its subsidiaries ("J.P. Morgan Private Bank"), research is provided to you by J.P. Morgan Private Bank and not by any other division of J.P. Morgan, including, but not limited to, the J.P. Morgan Corporate and Investment Bank and its Global Research division.

Legal entity responsible for the production and distribution of research: The legal entity identified below the name of the Reg AC Research Analyst who authored this material is the legal entity responsible for the production of this research. Where multiple Reg AC Research Analysts authored this material with different legal entities identified below their names, these legal entities are jointly responsible for the production of this research. Research Analysts from various J.P. Morgan affiliates may have contributed to the production of this material but may not be licensed to carry out regulated activities in your jurisdiction (and do not hold themselves out as being able to do so). Unless otherwise stated below, this material has been distributed by the legal entity responsible for production. If you have any queries, please contact the relevant Research Analyst in your jurisdiction or the entity in your jurisdiction that has distributed this research material.

General: Additional information is available upon request. The information in this material has been obtained from sources believed to be reliable. While all reasonable care has been taken to ensure that the facts stated in this material are accurate and that the forecasts, opinions and expectations contained herein are fair and reasonable, JPMorgan Chase & Co. or its affiliates and/or subsidiaries (collectively J.P. Morgan) make no representations or warranties whatsoever to the completeness or accuracy of the material provided, except with respect to any disclosures relative to J.P. Morgan and the Research Analyst's involvement with the issuer that is the subject of the material. Accordingly, no reliance should be placed on the accuracy, fairness or completeness of the information contained in this material. There may be certain discrepancies with data and/or limited content in this material as a result of calculations, adjustments, translations to different languages, and/or local regulatory restrictions, as applicable. These discrepancies should not impact the overall investment analysis, views and/or recommendations of the subject company(ies) that may be discussed in the material. J.P. Morgan accepts no liability whatsoever for any loss arising from any use of this material or its contents, and neither J.P. Morgan nor any of its respective directors, officers or employees, shall be in any way responsible for the contents hereof, apart from the liabilities and responsibilities that may be imposed on them by the relevant regulatory authority in the jurisdiction in question, or the regulatory regime thereunder. Opinions, forecasts or projections contained in this material represent J.P. Morgan's current opinions or judgment as of the date of the material only and are therefore subject to change without notice. Periodic updates may be provided on companies/industries based on company-specific developments or announcements, market conditions or any other publicly available information. There can be no assurance that future results or events will be consistent with any such opinions, forecasts or projections, which represent only one possible outcome. Furthermore, such opinions, forecasts or projections are subject to certain risks, uncertainties and assumptions that have not been verified, and future actual results or events could differ materially. The value of, or income from, any investments referred to in this material may fluctuate and/or be affected by changes in exchange rates. All pricing is indicative as of the close of market for the securities discussed, unless otherwise stated. Past performance is not indicative of future results. Accordingly, investors may receive back less than originally invested. This material is not intended as an offer or solicitation for the purchase or sale of any financial instrument. The opinions and recommendations herein do not take into account individual client circumstances, objectives, or needs and are not intended as recommendations of particular securities, financial instruments or strategies to particular clients. This material may include views on structured securities, options, futures and other derivatives. These are complex instruments, may involve a high degree of risk and may be appropriate investments only for sophisticated investors who are capable of understanding and assuming the risks involved. The recipients of this material must make their own independent decisions regarding any securities or financial instruments mentioned herein and should seek advice from such independent financial, legal, tax or other adviser as they deem necessary. J.P. Morgan may trade as a principal on the basis of the Research Analysts' views and research, and it may also engage in transactions for its own account or for its clients' accounts in a manner inconsistent with the views taken in this material, and J.P. Morgan is under no obligation to ensure that such other communication is brought to the attention of any recipient of this material. Others within J.P. Morgan, including Strategists, Sales staff and other Research Analysts, may take views that are inconsistent with those taken in this material. Employees of J.P. Morgan not involved in the preparation of this material may have investments in the securities (or derivatives of such securities) mentioned in this material and may trade them in ways different from those discussed in this material. This material is not an advertisement for or marketing of any issuer, its products or services, or its securities in any jurisdiction.

Confidentiality and Security Notice: This transmission may contain information that is privileged, confidential, legally privileged, and/or exempt from disclosure under applicable law.
